Experience

Wizard Development

March 2015 - Present

Developer

As a developer at Wizard Development, I was given full custody of whichever application I was working on. What this meant was having full responsibility of new features including everything from the CSS, to the API, and all the code planning to go with it. Having this sort of freedom helped me grow as a problem solver and also cultivated learning and innovation.

Barefoot Coders

February 2015 – March 2015

Developer

During my short stay at Barefoot Coders, I experienced my first production application and all the shell shock to go with it. This experience showed me that deploying is nothing to be scared about and pushed myself to write extendible production code.

LG Electronics

June 2014 - September 2014

PSI Analyst

Working at a huge corporation was a learning experience. I learned what it took to be a cog in a gigantic machine and realized it wasn't for me. As a PSI Analyst I was in charge of creating logistics reports.

Hoffman La-Roche

May 2012 – August 2012

Intern

I received my first taste of coding here. I developed scripts in Python to migrate data from Excel Spreadsheets to their new Lab Book application

Education

This is Metis

September 2014 – December 2014

Attending Metis was the changing point in my career. The boot camp taught Ruby on Rails and the tech to go with it by one of the most famous rails consultants of our time, Thoughtbot. We were taught their best practices and were given a firm foundation to continue our education. Metis was both the most intense and awesome 3 months I've experienced.

Rutgers University

September 2009 – May 2014

Bachelor of Science

Major in Mathematics | Minor in Physics

3.282 out of 4.0

Honors Thesis – A Study that used methods of Advanced Calculus, Number Theory, and graduate level Probability to prove “What is the probability that two random, independently chosen integers is co-prime?”

Dean's List, four semesters.

Academic Achievement Award, four semesters.

Skills

Ruby – Rails, Sinatra, RSspec

Notable Gems – Devise, Cancancan, Delayed Jobs, Pundit

Javascript – React, JQuery

HTML5

CSS3 – Bootstrap, Foundation, Bourbon, SASS

SQL – Postgresql, MySQL
